Python

Dart

React

Firebase

EDUCATION

University of Engineering and
Technology, Lahore

2021-2025

BSc. Computer Science

Current CGPA: 3.00

Government College University,
Lahore

2019 - 2021

F.S.c. Pre-Engineering

1050/1100

Crescent Model Higher
Secondary School, Lahore

2017 - 2019

Matriculation

1059/1100

PROFILE

As a computer science student, my thirst for knowledge is unquenchable. From algorithms to artificial intelligence, I eagerly absorb every bit of information, driven by the excitement of discovery and desire to innovate. Every challenge presents an opportunity to grow, and every line of code is a step towards mastering the digital world. Driven by curiosity and desire to innovate, I continuously seek out new information and tackle complex problems.

HIGHLIGHTED PROJECTS

ProFit

Flutter (Dart + Firebase)

Our Flutter Dart gym app redefines fitness convenience, making it easier than ever to achieve your health and wellness goals. Seamlessly track workouts, set personalized goals, and monitor your progress with an intuitive and visually appealing design. Elevate your fitness journey with features like real-time performance tracking, social sharing options, and tailored notifications to keep you on track.

ChitChatter

React (Node Js. + StreamChat)

In Node.js and React, our chat application fosters seamless communication. Experience real-time messaging, robust security features, and effortless navigation, making every interaction smooth and efficient. Whether you're connecting across the globe or across the room, our application ensures robust performance and data protection, enhancing the way you communicate and collaborate.

Travel Management System

.Net (C# + SSMS)

In .NET C#, our travel management system revolutionizes trip planning. Seamlessly book flights, hotels, and activities with our comprehensive platform, designed to streamline every aspect of your travel experience. Enjoy an intuitive interface, detailed itinerary management, and personalized recommendations, ensuring a hassle-free and enjoyable journey from start to finish.

Pacman Game

C++ (CLI)

Developed a fully-functional Pac-Man game using C++ for the Command Line Interface. The project included score tracking, game over conditions, and ensured cross-platform compatibility. Utilized Object-Oriented Programming principles to structure game components, enhancing code readability and maintainability, and conducted extensive debugging for smooth performance and responsive gameplay.
